GitHub | Portfolio: dhyey-ghoda-portfolio.vercel.app

Education

RV University 2024 – 2028
B.Tech in Computer Science *Bangalore, India*
Coursework: Data Structures & Algorithms, Database Management Systems, Machine Learning Fundamentals

Experience

Digizura Technologies Pvt. Ltd. | Certificate May 2026 – Jun 2026
Full-Stack Developer Intern *Bangalore, India*

- Built CableNXT, a MERN-stack (MongoDB, Express, React, Node.js) billing web app for local cable operators
- Shipped 5 modules: role-based JWT login, subscribers, packages, auto-invoicing, revenue dashboard
- Cut manual billing effort by an estimated ~70% in an internal test against the operator's spreadsheets

Projects

- **Nightshift QA – AI Regression Testing Platform** | GitHub | Live
  - Built an AI tester that runs plain-English tests in a real browser (Python, Playwright, VLMs)
  - A judge model must quote on-page proof for each result: 0 false passes in ~400 benchmark runs
  - Caught 23/23 planted bugs and judged 28/28 public practice sites correctly, at a 15 s median per test
  - Shipped a multi-tenant web app: nightly runs, client reports, cross-browser tests, 224 automated tests
- **PrivAgent – On-Device Privacy Browser Agent (Smart India Hackathon, ISRO)** | GitHub
  - Built a TypeScript browser extension that redacts personal data on-device before any request
  - Combined DOM rules with an on-device YOLO model (ONNX Runtime Web): precision 1.00, recall 0.98
  - Scored 0.96 precision / 0.94 recall on blind test pages; an egress guard blocks any data leaving the device
- **Threat Detection System using AI/ML (Argonyx Hackathon)** | GitHub
  - Built a real-time multi-camera CCTV system detecting weapons, fights, falls, crowd surges and intrusions
  - Trained a YOLO weapon detector (precision 0.86, mAP50 0.83) and a CLIP-based fight classifier (AUC 0.86)
  - Benchmarked on 56 real CCTV clips; runs 4 cameras at ~8 fps on an RTX 3050 with a FastAPI dashboard
- **Credit Card Fraud Detection using Machine Learning** | GitHub
  - Trained class-weighted logistic regression and a Keras neural network on 284,807 transactions (0.17% fraud)
  - On a held-out stratified test set: logistic regression recall 0.92, ROC-AUC 0.97; neural network precision 0.82
  - Built a Streamlit dashboard that scores uploaded CSV batches, with a confusion matrix and a PDF report
- **University Ideathon – 3rd Place**
  - Secured 3rd place among multiple teams with an innovative technology-based solution

Skills

Languages: Python, TypeScript, JavaScript, C++, Java, SQL, HTML, CSS
Machine Learning: Computer Vision (YOLO, CLIP, OpenCV), Vision-Language Models, AI Agents, Classification, Regression, SMOTE, Feature Engineering
Technologies: React, Node.js, Express, MongoDB, FastAPI, PyTorch, TensorFlow, Scikit-learn, Playwright, ONNX Runtime, SQLite, IoT (ESP32, GSM, GPS)
Tools: GitHub, GitHub Actions, Power BI, Figma, Canva, Photoshop, DaVinci Resolve
Soft Skills: Problem Solving, Teamwork, Communication, Quick Learning

Certifications

- Power BI for Beginners – Simplilearn (in collaboration with Microsoft), Apr 2026
- Data Analysis with Pandas and Python – Infosys Springboard, Nov 2025
- Computer Networking Basics: How Computers Communicate – IBM SkillsBuild, Aug 2025
