Education

RV University 2024 – 2028
B.Tech in Computer Science *Bangalore, India*
Coursework: Data Structures & Algorithms, Database Management Systems, Machine Learning Fundamentals

Experience

Digizura Technologies Pvt. Ltd. | Certificate May 2026 – Jun 2026
Full-Stack Developer Intern *Bangalore, India*

- Developed CableNXT, a MERN-stack (MongoDB, Express, React, Node.js) billing app for local cable operators
- Delivered 5 modules: role-based JWT login, subscribers, packages, auto-invoicing, revenue dashboard
- Cut manual billing effort by an estimated ~70% in an internal test against the operator's spreadsheets

Projects

- **Nightshift QA – AI Regression Testing Platform** | GitHub | Live
  - Engineered an AI tester that executes plain-English test cases in a real browser (Python, Playwright, VLMs)
  - Required a judge model to quote on-page proof for every verdict: 0 false passes in ~400 benchmark runs
  - Caught 23/23 planted bugs and judged 28/28 public practice sites correctly, at a 15 s median per case
  - Shipped a multi-tenant web app: nightly runs, client reports, cross-browser checks and a 224-test suite
- **ConceptAI – AI Teacher on a Live Whiteboard** | GitHub
  - Created an AI teacher that explains any topic on a live whiteboard: voice, diagrams, maths, code (Next.js)
  - Integrated a fact-checking model and a SymPy service that verifies the maths and executes the code shown
  - Used only free models (Gemini, Groq, local Ollama fallback); teaches every page of a PDF, with OCR for scans
- **PrivAgent – On-Device Privacy Browser Agent (Smart India Hackathon, ISRO)** | GitHub
  - Designed a TypeScript browser extension that redacts personal data on-device before any request
  - Combined DOM rules with an on-device YOLO model (ONNX Runtime Web): precision 1.00, recall 0.98
  - Scored 0.96 precision / 0.94 recall on blind test pages; an egress guard blocks any data leaving the device
- **Threat Detection System using AI/ML (Argonyx Hackathon)** | GitHub
  - Built a real-time multi-camera CCTV system detecting weapons, fights, falls, crowd surges and intrusions
  - Trained a YOLO weapon detector (precision 0.86, mAP50 0.83) and a CLIP-based fight classifier (AUC 0.86)
  - Benchmarked on 56 real CCTV clips; sustains 4 cameras at ~8 fps on an RTX 3050 with a FastAPI dashboard
- **Credit Card Fraud Detection using Machine Learning** | GitHub
  - Modeled 284,807 transactions (0.17% fraud) with class-weighted logistic regression and a Keras neural network
  - Achieved 0.92 recall, 0.97 ROC-AUC (logistic regression) and 0.82 precision (neural net) on held-out data
  - Added a Streamlit dashboard that scores uploaded CSV batches, with a confusion matrix and a PDF report
- **University Ideathon – 3rd Place**
  - Secured 3rd place among competing teams with a technology-based solution

Skills

Languages: Python, TypeScript, JavaScript, C++, Java, SQL, HTML, CSS
Machine Learning: Computer Vision (YOLO, CLIP, OpenCV), Vision-Language Models, AI Agents, Classification, Feature Engineering
Technologies: React, Next.js, Node.js, Express, MongoDB, FastAPI, PyTorch, TensorFlow, Scikit-learn, Playwright, ONNX Runtime, SQLite
Tools: GitHub, GitHub Actions, Power BI

Certifications

- Power BI for Beginners – Simplilearn (in collaboration with Microsoft), Apr 2026
- Data Analysis with Pandas and Python – Infosys Springboard, Nov 2025
- Computer Networking Basics: How Computers Communicate – IBM SkillsBuild, Aug 2025
